EDUCATION

Georgia Institute of Technology

Atlanta, GA

MS in Computer Science, Computing Systems & Machine Learning; GPA 4.0

Expected 2027

- **Relevant Coursework:** Operating Systems

University of Toronto

Toronto, ON

BASc in Industrial Engineering, Minor in Artificial Intelligence

2025

- **Relevant Coursework:** Operations Research, OOP, DSA, Stats/Probability, Big Data Mining, Deep Learning, Recommender Systems, Information Retrieval, Databases, Reinforcement Learning, Optimization in ML

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, C, C++, SQL

Frameworks & Runtimes: React/Next.js, Astro, Hono, Node.js, Bun, FastAPI, Spring Boot, PyTorch, Scikit-learn, Pandas, NumPy

AI & Agents: Claude Code as an agent harness (custom skills, MCP servers, tool design), OpenAI Agents SDK, Model Context Protocol, embeddings/RAG, LLM evals

Cloud & Tools: AWS (CDK/CloudFormation, Lambda, ECS/Fargate, API Gateway, CloudFront, S3, Aurora RDS, SQS, Cognito, Secrets Manager, CloudWatch), SST, Azure, Docker, Git, GitHub Actions

EXPERIENCE

Software Engineer

Sept 2025 – Present

Atrios, employee #6

Toronto, ON

- Own features end to end that helped scale an a16z speedrun-backed B2B referral marketplace to \$2M ARR, spanning the matching algorithm, Stripe payments and payouts, multi-tenant auth, CRM and calendar integrations, and the vendor, connector, lead, and admin experiences in Next.js and Hono
- Develop and scale the AWS backend with CDK infrastructure-as-code (ECS Fargate, Aurora, SQS), including a PostHog-instrumented, multi-signal scoring system that predicts intent across 250 booked meetings per month and drives conversion-weighted payouts
- Lead adoption of agentic engineering on Claude Code, writing custom skills and CLI tooling that automate CI/CD, PR review, ticket tracking, and live-site E2E testing, with engineers owning design and agents handling routine work

Software Engineer Intern

June 2025 – Sept 2025

HealthTap

Sunnyvale, CA

- Built an agentic voice assistant for primary care with the OpenAI Agents SDK realtime model and Twilio, automating patient support calls for 2M+ monthly users with guardrails designed around patient safety and privacy
- Designed tools and context for internal Model Context Protocol servers that automated customer support ticket triage

Software Engineer (Capstone)

Sept 2024 – Apr 2025

Ploopy Corporation

Toronto, ON

- Automated customer email responses using Azure App Service, Logic Apps, and Microsoft Graph API, reducing handling time from days to under 32 seconds
- Developed an email matching and ranking engine with Azure OpenAI embeddings and cosine similarity in a FastAPI backend for customer inquiry processing

Full Stack Engineer Intern

Sept 2023 – Apr 2024

Doctalk Inc.

Toronto, ON

- Designed and implemented event-driven architecture for real-time systems using Redis pub-sub and Supabase, building messaging and notifications from the ground up
- Migrated data models from RedisGraph to PostgreSQL by designing relational schemas that resolved structural incompatibilities while maintaining 100% uptime
- Built type-safe REST APIs with Node.js and TypeScript implementing role-based authentication and PostgreSQL row-level security (RLS) for flagship application features
- Developed responsive frontend components with React (Next.js), Context for state management, and Tailwind CSS that increased daily active users by 50%

Software Developer Intern

June 2022 – Sept 2022

Molex LLC

Waterloo, ON

- Transformed a legacy embedded CLI into a web app using Python, FastAPI, and Jinja, reducing testing times by 50%
- Leveraged Python's asyncio to allow multi-user concurrent testing, enhancing developer experience
